A Peak as would be reported on page 401, column d of Form 1 at the time of the applicable pricing zone coincident monthly peaks.

- B Labeled LF, LU, IF, IU on pages 310-311 of Form 1 at the time of the applicable pricing zone coincident monthly peaks
- C Labeled LF on page 328 of Form 1 at the time of the applicable pricing zone coincident monthly peaks. D Labeled LF on page 328 of Form 1 at the time of the applicable pricing zone coincident monthly peaks.
- E The FERC's annual charges for the year assessed the Transmission Owner for service under this tariff.
- F The balances in Accounts 190, 281, 282 and 283 are allocated to transmission plant included in rate base don Company accounting records. Accumulated deferred income tax amounts associated with asset or liability accounts excluded from rate base (such as ADIT related to asset retirement obligations and certain tax-related regulatory assets or liabilities) do not affect rate base. To the extent that the normalization requirements apply to ADIT activity in the projected net revenue requirement calculation or the true-up adjustment calculation, the ADIT amounts are computed in accordance with the proration formula of Treasury regulation Section 1.167(1)-1(h)(6). The remaining ADIT activity is averaged. Work papers supporting the ADIT calculations will be posted with each projected net revenue requirement and/or Annual True-Up and included in the annual Informational Filing submitted to the Commission. Account 281 is not allocated to Transmission.
- G Identified in Form 1 as being only transmission related. If page 227, line 5 includes non-transmission costs then the transmission portion will be specified in a footnote to the Form 1.
- H Cash Working Capital assigned to transmission is one-eighth of O&M allocated to transmission at page 3, line 8, column 5. Prepayments are the electric related prepayments booked to Account No. 165 and reported on Page 111, line 57 in the Form 1.
- 1 Line 5 EPRI Annual Membership Dues listed in Form 1 at 353.f, all Regulatory Commission Expenses itemized at 351.h, and non-safety related advertising included in Account 930.1. Line 5a Regulatory Commission Expenses directly related to transmission service, ISO filings, or transmission siting itemized at 351.h.
- J Includes only FICA, unemployment, highway, property, gross receipts, and other assessments charged in the current year. Taxes related to income are excluded. Gross receipts taxes are not included in transmission revenue requirement in the Rate Formula Template, since they are recovered elsewhere.
- K The currently effective income tax rate (T), where FIT is the federal income tax rate, SIT is the composite state income tax rate, p is the percentage of federal income tax deductible for state income taxes, and TO is the percentage of ownership with income tax liability. If the utility is taxed in more than one state it must attach a work paper showing the name of each state and how the blended or composite SIT was computed.

Required:	FIT =	21% (federal income tax rate)
	SIT=	4.9% (composite state income tax rate)
	$\mathbf{p} =$	0% (percent of federal income tax deductible for state purposes)
	TO =	80% (percentage of ownership with income tax liability)

- L Removes dollar amount of transmission expenses included in the OATT ancillary services rates, including Account Nos. 561.1, 561.2, 561.3, and 561.BA.
- M Removes transmission plant determined by Commission order to be state-jurisdictional according to the seven-factor test (until Form 1 balances are adjusted to reflect application of seven-factor test).
- N Removes dollar amount of transmission plant included in the development of OATT ancillary services rates and generation step-up facilities, which are deemed included in OATT ancillary services. For these purposes, generation step-up facilities are those facil
- O Enter dollar amounts

Inputs F

- P Debt cost rate = long-term interest (line 21) / long term debt (line 27). Preferred cost rate = preferred dividends (line 22) / preferred outstanding (line 28). The ROE will be the lower of 9.80% (inclusive of the 50 basis point RTO Adder) or the currently effective MISO region ROE plus the 50 basis point RTO Adder up to the upper end of the zone of reasonableness established by FERC. The ROE may be subject to reduction below 9.80% to comply with the Schedule Guarantee pursuant to the terms of Selected Developer Agreement. Compliance with the ROE Cap and any further reductions shall be demonstrated annually in a workpaper in the form of Attachment A to the Protocols.
- Q Line 33 must equal zero since all short-term power sales must be unbundled and the transmission component reflected in Account No. 456.1 and all other uses are to be included in the divisor.
- R Includes income related only to transmission facilities, such as pole attachments, rentals and special use.
- S Grandfathered agreements whose rates have been changed to eliminate or mitigate pancaking the revenues are included in line 4, page 1 and the loads are included in line 13, page 1. Grandfathered agreements whose rates have not been changed to eliminate or mitigate pancaking the revenues are not included in line 4, page 1 nor are the loads included in line 13, page 1.
- T The revenues credited on page 1, lines 2-5 shall include only the amounts received directly (in the case of grandfathered agreements) or from the ISO (for service under this tariff) reflecting the Transmission Owner's integrated transmission facilities. They do not include revenues associated with FERC annual charges, gross receipts taxes, ancillary services, facilities not included in this template (e.g., direct assignment facilities and GSUs) which are not recovered under this Rate Formula Template.
- U Account 456.1 entry shall be the annual total of the quarterly values reported at Form 1, 330.x.n.
- V Account Nos. 561.4 and 561.8 consist of RTO expenses billed to load-serving entities and are not included in Transmission Owner revenue requirements
- W Pursuant to Attachment GG of the MISO Tariff, removes dollar amount of revenue requirements calculated pursuant to Attachment GG.
- X Removes from revenue credits revenues that are distributed pursuant to Schedules associated with Attachment GG of the MISO Tariff, since the Transmission Owner's Attachment O revenue requirements have already been reduced by the Attachment GG revenue requirements.
- Y Pursuant to Attachment MM of the MISO Tariff, removes dollar amount of revenue requirements calculated pursuant to Attachment MM.
 Z Removes from revenue credits revenues that are distributed pursuant to Schedules associated with Attachment MM of the MISO Tariff, since the Transmission Owner's Attachment O revenue requirements have already been reduced by the Attachment MM revenue requirements.

Plant in Service, Accumulated Depreciation, and Depreciation Expense amounts exclude Asset Retirement Obligation amounts unless authorized by FERC. Within twelve

months after the date which is five years after the In-Service Date, Republic will prepare and file a new depreciation study pursuant to Section 205 of the Federal Power Act

- AA proposing updated depreciation parameters for the Project such as average remaining service lives and net salvage values. BB Schedule 10-FERC charges should not be included in O&M recovered under this Attachment O.
- CC Recovery of Regulatory Asset permitted only for pre-commercial and formation expenses as authorized by the Commission-Recovery of any other regulatory assets requires authorization from the Commission
- DD Unamortized Abandoned Plant and Amortization of Abandoned Plant will be zero until the Commission accepts or approves recovery of the cost of Abandoned Plant. Republic must submit a Section 205 filing to recover the cost of abandoned Plant.
- EE A hypothetical capital structure of 55% debt and 45% equity will be used until the Duff-Coleman Project is first included in the MISO transmission rates or until otherwise authorized by the Commission. After the Duff-Coleman project is first included in the MISO transmission rates or until otherwise authorized by the Commission. After the Duff-Coleman project is first included in the MISO transmission rates or until otherwise authorized by the Commission. After the Duff-Coleman Project is first included in the MISO transmission rates or until otherwise authorized by the Commission. After the Duff-Coleman Project is first included in the MISO transmission rates or until otherwise authorized by the Commission. After the Duff-Coleman Project is first included in the MISO transmission rates or until otherwise authorized by the Commission. After the Duff-Coleman Project is first included in the MISO transmission rates or until otherwise authorized by the Commission. After the Duff-Coleman Project is first included in the MISO transmission rates, the lesser of a 45% equity ratio or the actual equity ratio will be used. The equity percentage is capped at 45%. Republic shall prepare a workpaper annually in the form of Attachment A to the Protocols demonstrating compliance with, and any adjustments necessary to comply with, the equity cap.
- FF This adjusting entry will remove any residual revenue requirement on Attachment O due to rounding differences between project revenue requirements calculated on Attachment GG and /or Attachment MM, and that calculated on Attachment O, page 3 of 5, line 29, column 5. The result of this adjustment will be a zero net revenue requirement reported on line 7 below. If Republic ultimately has transmission assets that are recoverable under Schedules 7, 8, or 9 of the MISO Tariff, this adjustment will no longer be made.
- GG Lines 6b and 6c of page 1 will only be utilized when Republic has transmission facilities to be recovered under Schedules 7, 8, and 9. Line 6b represents the actual ATRR for the True-Up Year, utilizing Attachment O Republic populated with True-Up Year actual operating results. Line 6c will represent the actual revenue Republic received, during the True-Up Year, related to the transmission facilities recovered under this Attachment O Republic and will equal the amount reported on Page 4 of 5, line 36.
- HH The Duff-Coleman project will be in service prior to Republic recovering a revenue requirement and no portion of the project will be in Construction Work in Progress (CWIP). The initial investment in the Duff-Coleman Project is subject to a Total Rate Base Cap Amount, exclusive of Excluded Costs, pursuant to the terms of the Selected Developer Agreement. The Total Rate Base Cap Amount (as defined in the Selected Developer Agreement) will be applied to page 2 line 2 (Gross Transmission Plant) plus line 23a (the unamortized balance of pre-commercial expenses). If the Total Rate Base Cap Amount is exceeded as to costs subject to the cap, then Republic will (1) reduce the initial balance of the Regulatory Asset for pre-commercial expenses, if applicable, and (2) if necessary, reduce the transmission gross plant balances for the difference between the actual cost of Duff-Coleman and the Total Rate Base Cap Amount (s depreciating the facilities. The difference from (2) above will be allocated to all applicable transmission plant acounts, based on the pro-rata share of the plant balances by account prior to any reductions in (2) above. Republic shall file a workpaper in the form of Attachment A to the Protocols demonstrating compliance with the Total Rate Base Cap Amount.
- II Calculated using a 13 month average balance. Calculations stated in the Attachment O Republic Protocols for the Initial Rate Year (defined in the protocols) will be used in determining the projected net revenue requirement and Annual True-Up. For the Initial Rate Year, Republic will use twelve months (January to December) of balances in calculating the 13 month average for the determination of the projected net revenue requirement.
- JJ If the amounts on FERC Form 1, 354.20.b, 354.21.b, 354.23.b, 354.24.b, 354.25.b and 354.26.b are zero, then the dollar amount entered on line 13 shall be 1.00.
- KK Upon enactment of changes in tax law, ADIT balances are re-measured and adjusted in the Company's books of account, resulting in excess or deficient accumulated deferred income tax assets and liabilities. Excess or deficient ADIT attributable to timing differences between the amounts of expenses or revenues recognized for income tax purposes and amounts of expenses or revenues recognized for income tax purposes and amounts of expenses or revenues recognized for atemating purposes as well as subsequent recoverable or refundable amortization of such amounts will be based upon Company records and be calculated and recorded in accordance with ASC 740 and any applicable normalization requirements of the taxing jurisdiction. The Deficient or (Excess) ADIT Tax Adjustment is computed by multiplying each component of Deficient or (Excess) ADIT Tax Adjustment of ADIUSTMENTS TO RATE BASE or as the Deficient or (Excess) ADIT Tax Adjustment of INCOME TAXES will be supported by Attachment 2-Excess or Deficient ADIT providing the balance for each taxing jurisdiction at the beginning and end of the year, amortization for the year, calculation of the gross-up to the revenue requirement level and any other information required to support compliance with any applicable normalization requirements.
- LL Includes the annual income tax cost or benefit due to permanent differences between the amounts of expenses or revenues for ratemaking purposes and the amounts recognized for income tax purposes, including the effects of regulatory depreciation of plant basis attributable to Allowance for Other Funds Used During Construction (AFUDC-equity). The tax adjustment related to these items is computed by multiplying the tax effect of each item by the applicable tax grossup factor and will be supported by a work paper.
- MM Investment tax credit (ITC) is recorded in accordance with the deferral method of accounting and any normalization requirements that relate to the eligibility to claim the credit or the receipture of the credit. The balance of Account 255 is reduced by amortization of ITC, but is excluded from the computation of rate base if the utility chose to utilize amortization of ITC against operating income. A utility that elected to utilize ITC amortization against operating income, rather than reduce take base by unamortized ITC recorded in Account No. 255, must reduce its income tax expense by the amount of the Amortized Investment Tax Credit (Form 1, 266.8.1) multiplied by the applicable tax gross-up factor. The impact of Account 255 on rate base or the impact of ITC amortization on income tax expense as recorded in Account 411.4 and on the revenue requirement will be supported by a work paper.
- NN Includes Account 456 Other Electric Revenues related only to transmission facilities or recovery of transmission O&M, such as Schedule 50

A
Gross Transmission Plant is that identified on page 2 line 2 of Attachment O- Republic and includes any Unamortized Regulatory Asset and Unamortized Abandoned Plant balances, if approved by FERC. Net Transmission Plant is that identified on page 2 line 14 of Attachment O- Republic and includes any Unamortized Regulatory Asset and Unamortized Abandoned Plant balances, if approved by FERC. Project Gross Plant is the total capital investment for the project calculated in the same method as the gross plant value in line 1 This value includes subsequent capital investments required to maintain the facilities to their original capabilities. The Project Gross Plant amount will include any Unamortized Regulatory Asset and Unamortized Abandoned Plant balance related to the project, if approved by FERC, reported in Attachment O - Republic page 2 line 23a and anti-

D Project Net Plant is the Project Gross Plant Identified in Column 3 less the associated Accumulated Depreciation. The Project Net Plant amount will include any Unamortized Regulatory Asset and Unamortized Abandoned Plant balance related to the project, if approved by FERC, reported in Attachment O - Republic page 2 lines 23a and 23b.

E Project Depreciation Expense is the actual value booked for the project and included in the Depreciation Expense in Attachment Q Republic page 3 line 12. For clarification, amortization expense related to Regulatory Assets or Abandoned Plant will be excluded from the depreciation expense reported for the project, as the amortization expense is included in page 1 lines 3 and 5.

F True-Up Adjustment is included pursuant to a FERC approved methodology, if applicable.

G The Network Upgrade Charge is the value to be used in Schedules 26, 37 and 38.

H The Total General and Common Depreciation Expense excludes any depreciation expense directly associated with a project and thereby included in page 2 column 9.

Attachment 2 - Excess or Deficient Accumulated Deferred Income Taxes - Summary

2024 Projection

Line No.

2

1 The primary purposes of this worksheet are to:

- reconcile the amounts of regulatory assets and liabilities comprising the rate base adjustment mechanism on Attachment O, Page 2, Line 23c (ADJUSTMENTS TO RATE BASE-Deficient or (Excess) ADIT) as of the beginning and end of the current test period (summarized beginning at Line 3 below) and

- to support the amount of excess deferred tax expense or benefit recognized due to enacted change(s) in tax rate(s) on Attachment O, Page 3, Line 24a (INCOME TAXES-Deficient or (Excess) Deferred Income Taxes) and the effect of such excess deferred tax expense or benefit on the revenue requirement as reflected in the income tax allowance adjustment mechanism on Attachment O, Page 3, Line 26a (INCOME TAXES-Deficient or (Excess) Deferred Income Taxes) and the income tax allowance adjustment mechanism on Attachment O, Page 3, Line 26a (INCOME TAXES-Deficient or (Excess) Deferred Income Tax and the income tax allowance adjustment mechanism on Attachment O, Page 3, Line 26a (INCOME TAXES-Deficient or (Excess) Deferred Income Tax adjustment) during the text period (summarized beginning on Line 9 below).

This worksheet supports the computation of the projected revenue requirement or, as appropriate, the actual revenue requirement used to compute the true-up adjustment.

Each tax law change addressed by this worksheet with its associated explanatory note is listed below. Amounts related to each tax law change are provided and supported throughout this worksheet. Additional lines and explanatory notes will be added to this worksheet as necessary as tax law changes are enacted without the need for an FPA Section 205 filing.

This worksheet addresses tax law changes resulting in: - the decrease in federal income tax rate pursuant to the Tax Cuts and Jobs Act ("TCJA") (see Note 1a) and - the decrease in Indiana income tax rate (see Note 1b).

This line and lines described as "Items related to subsequent tax law changes" will be updated for subsequent tax law changes and such changes will be described in Note 1c.

21	Total for account 254	(sum of lines 20_)		-	-	-	-	-	-	
22				FN1. pg 278				FN1. pg 278		

23 Analysis - Balances of tax-related regulatory assets and liabilities include tax gross-up. Accordingly, for the regulatory assets and liabilities include in rate base, the related deferred tax assets and liabilities are also included in rate base. Remeasurements in column (e) are described in Notes 2 and 3 and are based on the journal entry below and the support on the worksheet for the applicable tax law change. Averaging or proration of amounts affecting rate base is computed on different sections of Attachment 2.1 for projected revenue requirement and actual revenue requirement.

24 Income Tax Allowance Adjustment Mechanism

25 The income tax allowance adjustment mechanism may include amortization of excess or deficient ADIT pertaining to deferred tax expense or benefit reflected in rates at a historical tax rate when the underlying timing difference(s) originated (computed under Amortization of Excess or Deficient ADIT within the Income Tax Allowance Adjustment Mechanism section of this worksheet) as well as an adjustment for tax law changes with prospective effective dates intended to mitigate the over- or under-recovery of deferred income taxs originating prior to the effective date of such tax law changes (computed under Adjustment Mechanism section of this worksheet).

 Adjustment for Tax Law Changes with Prospective Effective Dates
 In the case of tax law changes with an effective date(s) after the beginning of the test period, the impact of a timing difference on current tax expense or benefit differs from the impact on ADIT. For example, in the case of a deductible timing difference originating in a tax year with a higher enacted tax rate than will apply when the difference will reverse, the current tax benefit will exceed the tax is the tax is the tax of a deductible timing difference originating in a tax year with a higher enacted tax rate than will apply when the difference will reverse, the current tax benefit will exceed the tax is the tax of the tax of the tax of tax is the tax of the tax of tax is the tax o deferred tax expense. In this situation, the adjustment computed below to recoverable income tax expense is made in order to avoid over-recovering income tax expense in the current test period due to the excess of current tax benefit over deferred tax expense (computed based on the estimated amount of the future tax liability) with respect to a given timing difference. The adjustment to recoverable tax expense during the test period in which a timing difference originates mitigates the need for rectified of a regulatory liability for excess deferred taxes in a future period. A Amounts in column (i) are reported in the loncen Tax Allowance Adjustment Mechanism - applicable, the need for recurrence and the loncen Tax Allowance Adjustment Mechanism - applicable, the need for recovery of a regulatory asset for deficient deferred taxes in a future period. A Amounts in column (i) are reported in the loncen Tax Allowance Adjustment Mechanism - a superiod to the loncent tax Allowance Adjustment Mechanism - a superiod to the loncent tax Allowance Adjustment Mechanism - and the loncent tax Allowance Adjustment Mechanism - a superiod to the loncent tax Allowance Adjustment Mechanism - and tax - an Summary on this worksheet.

39 Note 1 - Summary of re-measurement of ADIT resulting from tax law changes

40 The purposes of this portion of the worksheet are, for each change in tax law, to explain:
 - how any ADIT accounts were re-measured,

- the excess or deficient ADIT contained therein, and

- the accounting for any excess or deficient amounts in Accounts 182.3 (Other Regulatory Assets) and 254 (Other Regulatory Liabilities).

Note 2 describes how ADIT accounts are re-measured upon a change in income tax law. A separate summary (i.e., Note 1a, Note 1b, etc.) will be added for each tax law change resulting in a remeasurement of ADIT.

61 Analysis of 2017 decrease in federal income tax rate. Republic had not begun providing electric transmission service prior to the 2017 federal change in tax law and, thus, the resulting remeasurements of ADIT recorded in 2017 did not affect rate base or result in refluadable excess ADIT amounts or recoverable deficient ADIT amounts. The decrease in tax rate reduced the regulatory asset in Account 182.3 and deferred tax liabilities in Accounts 282 and 283 related to accrued/capitalized AFUDC-equity and the carrying charge for deferred pre-commercial costs. Accordingly, the decrease in tax rate will reduce the requirement associated with depreciation of AFUDC-equity after the associated in the revenue requirement associated with amortization of the regulatory saste for the carrying charge after recovery begins.

62 Note 1b - Summary of Phase-down of Indiana income tax rates through July 1, 2021 Additional information is provided in Note

63 Analysis of decrease in Indiana income tax rate - Republic had not begun providing electric transmission service prior to the 2014 Indiana change in tax law and Republic has yet to recover Indiana income tax rates write in effect. In addition, different Indiana income tax rates write in effect. In addition, different Indiana income tax rates write in effect. In addition, different Indiana income tax rates write in effect. In addition, different searces are expected to reverse would impact ADIT measurements of the remaining timing differences are expected to reverse would impact ADIT measurements of the remaining timing differences are expected to reverse would impact ADIT measurement. Reversal of timing differences in tax years other than the years such timing differences are expected to reverse would impact ADIT measurements of the trax-related regulatory asset in Account 82.3 and deferred tax liabilities in Accounts 28.2 and 283 related to accervate queries and the computation of the regulatory asset for such tax is compated on an after-tax basis and would also cause measurement of the resolution associated ADIT. Remeasurements of ADIT ano not occurred and, thus, rate base has not been after-tad and refundable excess ADIT monutos for ecoverable deficient ADIT amounts do not exist.

64 Note 1b - Summary of [name of tax law change]

Additional information is provided in Note

65 Note 2 - Explanation of how ADIT accounts are re-measured upon a change in income tax law

Deferred tax assets and liabilities are adjusted (re-measured) for the effect of the changes in tax law (including tax rates) in the period that the change is enacted. Adjustments are recorded in the appropriate deferred tax balance sheet accounts (Accounts 190, 281, 282 and 283) based on the nature of the temporary difference and the related classification requirements of the accounts. If as a result of action or expected action by a regulatory, it is probable that the future increase or decrease in taxes payable due to the change in tax law (and the related classification requirements of the accounts. If as a probable future increase or decrease in taxes payable due to the change in tax law or rates will be recovered from or returned to customers through future rates, a regulatory asset or liability is recognized in Account 182.3 (Other Regulatory Assets), or Account 254 (Other Regulatory Liabilities), as appropriate, for that probable future increase or decrease in taxes payable due to the change in tax law cates equal to a tax is a decrease or decrease in taxes payable due to the change in tax law. If it is not probable that the future increase or decrease in taxes payable due to the change in tax law or rates will be recovered from or returned to customers through future rates, tax expense is recognized in Account 410.2 (Provision for Deferred Income Taxes, Other Income or Deductions) or tax benefit is recognized in Account 410.2 (Provision for Deferred Income Taxes, Other Income or Deductions) or tax benefit is recognized in Account 410.2 (Provision for Deferred Income Taxes, Other Income or Deductions) or tax benefit is recognized in Account 410.2 (Provision for Deferred Income Taxes, Other Income or Deductions) or tax benefit is recognized in Account 410.2 (Provision for Deferred Income Taxes, Other Income or Deductions) or tax benefit is recognized in Account 410.2 (Provision for Deferred Income Taxes, Other Income or Deductions) or tax benefit is recognized in Account 410.2 (Provision for Deferred Inc

66 Note 3 - [Complete to support information above.]

67 Note 4 - The amortization of the deficient or excess ADIT reducing Account 254 (Other Regulatory Liabilities) is recorded with credits to Account 411.1 (Provision for Deferred Income Taxes - Credit, Utility Operating Income) and to Account 140 (Accumulated Deferred Income Taxes) or Account 258 (Accumulated Deferred Income Taxes - Other), as appropriate, in accordance with the Commission's Accounting for Income Taxes Suidance. The amortization of the deficient or excess ADIT reducing Account 182.3 (Other Regulatory Asset) is recorded with debits to Account 410.1 (Provision for Deferred Income Taxes, Utility Operating Income) and to Account 190 (Accumulated Deferred Income Taxes) or Account 283 (Accumulated Deferred Income Tax Allowance Mechanism - Projected" or the table above reflects tas gross-up and is stated at the revuence requirement level.

68 Note 5 - No Other Adjustments during the current period.

69 Note 6 - The worksheet indicates whether each excess or deficient ADIT amounts are protected (i.e., subject to normalization rules of a taxing jurisdiction) or unprotected (i.e., not subject to normalization rules of a taxing jurisdiction). To the extent that normalization requirements apply to ADIT remeasurements, additional computations (e.g., proration of excess deferred tax activity related to future test periods) may be necessary.
[Continuation of not with respect to particular changes in tax law.]

70 [Insert additional notes as needed.]

Attachment 2.1 - Regulatory Assets/Liabilities for Deficient/Excess ADIT - Averaging and Proration Adjustments Support for Attachment 2 (Excess or Deficient Accumulated Deferred Income Taxes - Summary) 2024 Projection

Line No.

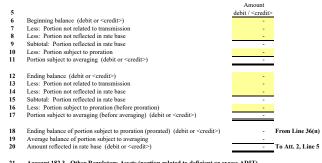

Rate year =
 Test period days after rates become effective

This attachment includes sections that are populated only with actual data and thus, these sections remain blank when the formula rate template is calculating a projected revenue requirement. Columns (i) through (n) below are not used for the projection and are only populated with actual data for the Annual Update.

3 Note 1 - The computations below apply the proration rules of Treasury Regulation section 1.167(1)(h)(6) to the annual activity of the portions of the deficient or excess accumulated deferred income taxes recorded in account 182.3 or 254 that are subject to the normalization requirements. Activity related to the portions of the account balances reflected in rate base but not subject to the portation requirement is averaged instead of prorated. The balances below include tax gross-up. The corresponding portions of the deferred tax asser related to the portions of the regulatory liability and the corresponding portions of the deferred tax is the related to the portions of the regulatory liability and the corresponding portions of the deferred tax liability related to the portions of the regulatory asset are also reflected in rate base and prorated or averaged, as appropriate. Columns (a) through (h) are used for projected and actual revenue requirements computations. Columns (i) through (n) are used for actual revenue requirement computations.

72 Note 3 - No refund of excess or deficient deferred taxes will occur in 2024 and, thus, this calculation is not applicable.

- 73 if projected and actual activity are both positive, a negative in Column J represents over-projection (i.e., the amount of projected activity that did not occur) and a positive in Column J represents under-projection (i.e., the excess of actual activity over projected activity). If projected and actual activity are both negative, a negative in Column J represents under-projection (i.e., the excess of actual activity) and a positive in Column J represents over-projection (i.e., the amount of projected activity that did not occur) and a positive in Column J represents over-projection (i.e., the amount of projected activity that did not occur).
- 74 Note 5 Column K preserves the effects of excess ADIT proration from the projected revenue requirement when actual monthly excess ADIT activity and projected monthly excess ADIT activity are either both increases or decreases. Specifically, if Column J indicates that excess ADIT activity was over-projected, enter Column G Y. [Column 1/]. If Column J, Indicates that excess ADIT activity was under-projected, enter the amount from Column G and complete Column L). In other situations, enter zero.
- 75 Note 6 Column L applies when (1) Column J indicates that excess ADIT activity was under-projected AND (2) actual monthly and projected monthly activity are either both increases or both decreases. Enter 50 percent of the amount from Column J. In other situations, enter zero. The excess ADIT activity in column L is multiplied by 50 percent to reflect averaging of rate base to the extent that the proration requirement has not been applied to a portion of the monthly excess ADIT activity.
- 76 Note 7 Column M applies when (1) projected monthly activity was an increase while actual monthly activity was a decrease OR (2) projected monthly activity was a decrease while actual monthly activity was an increase. Enter 50 percent of the amount of actual monthly activity (Column I). In other situations, enter zero. The excess ADIT activity in column M is multiplied by 50 percent to reflect averaging of rate base to the extent that the provation requirement has not been applied to a portion of the monthly excess ADIT
- 77 Note 8 Column N is computed by adding the balance at the end of the prior month to EITHER (1) the sum of prorated monthly excess ADIT activity, if any, from Column K and the portion of monthly excess ADIT activity, if any, from Column L OR (2) the portion of monthly excess ADIT activity in Column M.

Republic Transmission, LLC

Attachment 2.2 - Re-measurement of ADIT and Tax-related Regulatory Assets and Liabilities Resulting from the Tax Change Identified in Line 1 Support for Attachment 2 (Excess or Deficient Accumulated Deferred Income Taxes - Summary)

2024 Projection

Line No. 1 2

1 Re-measurement of ADIT resulting from the 2017 decrease in federal income tax rate

The following computation provides the ADIT and tax-related regulatory assets and liabilities balances for each temporary difference as of the effective date of the change in tax rate enacted in 2017. The ratemaking treatment of each item in terms of whether it is subject to the normalization requirements (i.e., P or "protected") or not subject to the normalization requirements (i.e., U or "unprotected") and included in rate base or not (i.e., RB or non-RB) is indicated in column (b). The balances are measured at the composite tax rate in effect immediately before effective date of the change in tax law and remeasured intermediately after the change in tax law. Each set of balances includes the appropriate income tax rates and tax gross-up factors (as computed in Att 2, Note 1a). The journal entry to record the remeasurements (row 31) is based on the differences in balances of accounts recorded prior to the change in 1Att 2, Note 2.

This worksheet will be included in support of the revenue requirement computation until the excess or deficient ADIT is fully amortized. A similar worksheet will be used for subsequent changes in tax law resulting in re-measurement of ADIT.

- 3 The ratemaking treatment of each item in terms of whether it is subject to the normalization requirements (i.e., P or "protected") or not subject to the normalization requirements (i.e., U or "unprotected") and included in rate base or not (i.e., RB or non-RB) is indicated in column (b). The balances are measured at the composite tax rate in effect immediately before effective date of the change in tax law and remeasured immediately after the change in tax law. Each set of balances includes the appropriate income tax rates and tax gross-up factors (as computed in the specific note for this tax law change in Att. 2). The journal entry to record the remeasurements (Line 16) is based on the differences in balances of accounts recorded prior to the change in law (columns (d)-(h)) and activity in other accounts resulting from the remeasurement (columns (i)-(n)). The remeasurement entry is also included in Att. 2. The accounting is further described in Att. 2.
- 4 This worksheet will be included in support of the revenue requirement computation until the excess or deficient ADIT is fully amortized. A similar worksheet will be used for subsequent changes in tax law resulting in re-measurement of ADIT.

WP2 - Proration/Averaging of ADIT and Certain Tax-related Regulatory Assets/Liabilities

Line No. 1 Rate year = 2024 Test period days after rates become effective 366 Note 1 - The computations on this workpaper apply the proration rules of Treasury Regulation Sec. 1.167(l)-1(h)(6) to the annual activity of depreciation-related accumulated deferred income taxes that are subject to the normalization requirements. Activity related to the portions of the account balances not subject to the proration requirement is averaged instead of prorated. Note 2 - Accumulated deferred income tax amounts reflected in rate base exclude ADIT related to assets and liabilities excluded from rate base, including amounts related to asset retirement obligations, other post-employment benefit obligations and tax-related regulatory assets and liabilities. Account 282 - Accumulated Deferred Income Taxes (projected) Amount debit / (2,434,032) Beginning Balance Less: Portion not related to transmission Less: Portion not reflected in rate base Subtotal: Portion reflected in rate base (410,125) (2,023,907) (2,007,014) (16,893) Less: Portion subject to proration Portion subject to averaging Ending Balance Less: Portion not related to transmission Less: Portion not reflected in rate base Subtotal: Portion reflected in rate base 12 (2,794,956) (402,264)

13 14 15 Less: Portion subject to proration (before proration) Portion subject to averaging (before averaging) 16 17 (2,432,511) 39,819

- 86 Note 4 Column J is the difference between actual monthly and projected monthly activity (Column I minus Column C). Specifically, if projected and actual activity are both positive, a negative in Column J represents over-projection (i.e., the amount of projected activity). If projected and actual activity are both negative, a negative in Column J represents under-projection (i.e., the excess of actual activity over projected activity). If projected and actual activity are both negative, a negative in Column J represents under-projection (i.e., the excess of actual activity over projected activity). of actual activity over projected activity) and a positive in Column J represents over-projection (i.e., the amount of projected activity that did not occur).
- 87 Note 5 Column K preserves the effects of excess ADIT proration from the projected revenue requirement when actual monthly excess ADIT activity and projected monthly excess ADIT activity are either both increases or decreases. Specifically, if Column J indicates that excess ADIT activity was over-projected, enter Column G x [Column I / Column C]. If Column J indicates that excess ADIT activity was under-projected, enter the amount from Column G and complete Column L). In other situations, enter zero.
- 88 Note 6 Column L applies when (1) Column J indicates that excess ADIT activity was under-projected AND (2) actual monthly and projected monthly activity are either both increases or both decreases. Enter 50 percent of the amount from Column J. In other situations, enter zero. The excess ADIT activity in column L is multiplied by 50 percent to reflect averaging of rate base to the extent that the proration requirement has not been applied to a portion of the monthly excess ADIT activity.
- Note 7 Column M applies when (1) projected monthly activity was an increase while actual monthly activity was a decrease OR (2) projected monthly activity was a decrease or while actual monthly activity was an increase. Enter 50 percent of the amount of actual monthly activity (Column I). In other situations, enter zero. The excess ADIT activity in column M is multiplied by 50 percent to reflect averaging of rate base to the extent that the proration requirement has not been applied to a portion of the monthly actives ADIT 89 activity.
- 90 Note 8 - Column N is computed by adding the balance at the end of the prior month to EITHER (1) the sum of prorated monthly excess ADIT activity, if any, from Column K and the portion of monthly excess ADIT activity, if any, from Column L OR (2) the portion of monthly excess ADIT activity in Column M.

Republic Transmission, LLC 2024 Projection WP3 - Listing of Permanent Book/Tax Differences

The book/tax differences reflected in recoverable income tax expense are differences between revenues and expenses reflected in the revenue requirement and revenue and deductions reflected in taxable income. As such, non-operating (below-the-line) expenses and income are not included (e.g., accrual of AFUDC-equity, certain lobbying costs). Book depreciation of capitalized AFUDC-equity is reflected in ratemaking, but not for income tax purposes, and, thus, is a permanent book/tax difference in this context. Similarly, amortization of carrying charges accrued based on the after-tax equity return is reflected in ratemaking but in income tax reporting and, thus, also results in a permanent book/tax difference.

Permanent differences per tax return	per Formula Rate
Depreciation of AFUDC-equity Amortization of Reg Carrying Charges-Equity Rate	39,508 6,852
Total permanent book/tax differences	46,361
Tax rate	19.90%
Tax effect of permanent book/tax differences	9,224 To Attachment O, Page 3, Line 24b, Column 3
Tax gross-up factor	1.3310
Permanent Differences Tax Adjustment	12,278 To Attachment O, Page 3, Line 26b, Column 3
